"

Innovation
Over 2025, I contributed to Innovation by building and improving solutions that made our data and platform capabilities more scalable and easier to use. I converted the current implementation to reactive programming for standard mastery report increasing overall report performance. I improved and supported **event-driven / service-based workflows.** Helped move data and updates through the system in a more automated and resilient way. The main focus has always been focusing on reducing manual effort and improving speed from raw data.

Quality
I worked through and fixed challenges like row explosion risks, incorrect joins, and performance bottlenecks in multi-join SQL patterns, improving both accuracy and runtime reliability. I emphasized cleaner data modeling so downstream dashboards and stakeholders can trust the outputs. Over the year, fixed more than 500 bug tickets to improve application stability.

Success
I contributed to Success by delivering work that directly supported business outcomes: better reporting, smoother operations, and faster turnaround on data and product needs.

"

7. Manager Overall Remarks

Reviewer

Adeel Asghar
Principle Software Engineer

4.0
Reviewer Rating

"

He is a key team member with strong problem-solving skills and exceptional dedication to his work. He is hardworking and responsible for reporting tasks from research to implementation. He has developed Item Analysis and User Usage reports with improved database structures, which are planned to be used later for LTI and overall application reporting. Furthermore, he manages the LTI process, handles client queries, and, aside from LTI grading, takes responsibility for other critical tasks. Although the LTI process is somewhat complex, he handles it effectively using best coding practices, consistently delivering high-quality results and supporting the team's success.
