Professional Development Statement

After graduating in 2020, I began my professional journey in the **education and technology sector** with *TechnoKnowledge*, where I joined as a content writer. Through continuous **professional growth**, consistent performance, and a strong commitment to **lifelong learning**, I progressed into leadership positions and am currently serving as **Curriculum Head – North Region**, following nearly six years of continuous service with the organization.

In this **leadership role**, I have played a key part in **curriculum development** and academic planning. My responsibilities include the design and alignment of **Student Learning Outcomes (SLOs)**, development of **grade-wise lesson plans**, and preparation of comprehensive **schemes of work**. I have also been actively involved in **teacher training** and **capacity building** initiatives, supporting educators in adopting effective pedagogical practices and integrating technology into classroom instruction.

As part of my contribution to **educational innovation**, I have taught **block-based programming** to young learners through multiple technology camps, fostering early computational thinking and problem-solving skills. These initiatives have contributed to strengthening **digital skills** among students and educators, while promoting technology-enabled learning environments.

Alongside my professional responsibilities, I further strengthened my academic and pedagogical foundation by completing my **Bachelor of Education (B.Ed.)**, which enhanced my instructional strategies and classroom management skills. Currently, I am serving as an **Elementary School Teacher (EST – BPS-14)** in a government school, where I apply student-centered and innovative teaching approaches to improve learning outcomes and promote inclusive education, contributing directly to **community impact**.

In addition to my formal roles, I founded an **online academy** where I teach **web development, Python, and Generative AI**, equipping learners with future-ready **digital skills** and practical technical competencies. I have also ventured into entrepreneurship through an **online candle-making business**, reflecting my **multi-sector experience**, entrepreneurial mindset, and commitment to continuous self-development.

Throughout my career, I have received **multiple professional awards and recognitions** in acknowledgment of my contributions to education, curriculum development, and capacity building. My professional journey demonstrates sustained growth, effective leadership, innovation, and meaningful societal contribution—qualities that strongly align with the objectives of the **Alumni Achievement Award in Professional Development**.
