**Nominee Name:** Aiza Batool
**Registration No.:** FA11-BEL-007
**Degree:** Bachelor of Science in Electronics, COMSATS University Islamabad
**Duration:** 2011–2015
**Award Category:** Alumni Excellence in Professional Achievement

Aiza Batool is an accomplished engineer and researcher whose academic and professional journey reflects excellence, resilience, and global impact. Her foundation was built at **COMSATS University Islamabad (CUI)**, where she earned her Bachelor of Science in Electronics (2011–2015). A proud COMSIAN, she attributes her intellectual grounding, discipline, and passion for engineering to her formative years at CUI.

Following graduation, Aiza completed a professional internship at the **Military College of Signals, Rawalpindi**, gaining exposure to advanced communication systems and technical environments. In 2016, she moved to Europe to pursue higher education under the prestigious **Erasmus program in Mathematical Modelling in Engineering**, where she developed a strong interest in control engineering. This led to her selection at **Sapienza University of Rome**, where she commenced a fully funded master's degree in **Control Engineering**.

Her academic excellence earned her another highly competitive opportunity as an **Erasmus exchange student at TU Dortmund University, Germany**, where she spent one year specializing in **Automation and Robotics**. She successfully defended her master's thesis titled *"Global Period Estimation for Periodic Signals: Application to Robot Synchronization"* with top academic distinction.

Aiza's pursuit of excellence continued with her selection for a **fully funded PhD at Sapienza University of Rome**. In September 2025, she successfully defended her doctoral thesis, *"Collision-Free Trajectory Tracking for Quadrotor UAVs: Closed-Form versus Optimization-Based Controllers,"* in Computer Engineering at the Department of Computer, Control and Management Engineering. Her research contributes to safe and efficient trajectory planning for autonomous aerial systems in constrained and complex environments.

Her academic career includes several notable distinctions. She was the **only woman in her PhD cohort** and the only female graduate among her peers. She participated in an international **summer school in the Czech Republic**, conducting real world drone simulations, and authored a peer-reviewed paper accepted at **CODIT 2025** as the **sole author**, a rare achievement for an early-career researcher.

After years of academic excellence, Aiza transitioned into industry, securing a role as a **Process Engineer at WITRON Group in the Netherlands**, a global leader in automated logistics systems. Notably, she was the **only Pakistani and the only woman** in her professional cohort, further underscoring her trailblazing presence in international engineering environments. Her work involved analyzing large scale operational data and contributing to process optimization within highly complex automated systems.

Building upon this experience, Aiza is now transitioning into the role of **Automation Engineer** at one of the world's leading port and inland terminal operators, an organization internationally recognized for advancing efficiency, digitalization, and sustainability in global trade logistics, with a mission to become the world's best terminal company.

Aiza Batool's journey from COMSATS University Islamabad to leading European institutions and global industry exemplifies the highest standards of professional achievement. She remains deeply proud of her roots at CUI and continues to represent the university as a committed and inspiring ambassador on the international stage.
