Ayesha Imran is an emerging leader in the interdisciplinary fields of **Microplastics, Plant Biotechnology, Bioinformatics, and Soil Sciences**. She completed her **B.S in Bioinformatics at COMSATS University, graduating in 2021**, and is currently pursuing her **MS research at NUST**, where she has distinguished herself through rigorous research, innovative methodologies, and impactful publications.

Her scholarly contributions include **eight published research articles**, with an additional **8 book chapters currently under review**, collectively garnering **51 citations**. With an **h-index and i10-index of 3**, her work reflects both quality and growing influence, marking her as a rising researcher whose studies are recognized and utilized by peers in academia and industry.

Ayesha's research addresses pressing environmental and agricultural challenges, particularly the emerging concerns of **microplastics in ecosystems** and their interaction with plant systems. Her work integrates **cutting-edge bioinformatics approaches with experimental plant biotechnology and soil science**, producing insights that bridge fundamental science and real-world applications.

In addition to her publications, Ayesha actively contributes to the academic community through collaboration, mentorship of junior researchers, and engagement with interdisciplinary research networks. Her trajectory from an outstanding **Bioinformatics undergraduate at COMSATS** to a promising MS researcher at NUST exemplifies sustained excellence and dedication to advancing scientific knowledge.

Through her commitment, innovation, and impactful scholarship, Ayesha Imran represents a new generation of scientists whose work promises lasting contributions to her field and society at large

Dr. Waseem Haider

Assistant Professor (Bioinformatics)

Department of BioSciences

Comsats University Islamabad
